Key flight 3, L1's failure: seed 8 (true delay 32 ms vs 25 assumed, slow motors), motor-fault mission (wave O)

Same seed for every arm (same wind, vehicle and events). Grey bands: goto transits, where the error is the distance still to fly, not tracking error; they are left out of (b) and (c). Vertical lines: mission events as applied in the sim. The plot runs to the end of the log.
